About Me

I'm a Software Developer with 2+ years of experience. I've worked in Backend, Frontend, and AWS technologies. I am also used to delivering demos and presenting at events.

I thrive in environments where I need to adapt quickly and push my tech skills' growth. I care for my teams and projects, which is why I like to offer solutions for our technical and non-technical challenges. I'm a team player.

After work, I'm currently pursuing a Master's in *Software development with AI*, and also go to the gym. "*Mens sana in corpore sano!*".

Skills

Most comfortable	TypeScript/ JS, Python, React, AWS, Terraform Agile/SCRUM, Jira
Comfortable	Go (<i>would like to refresh</i>), CI/CD pipelines on GH, Flask (<i>It's been a while</i>)
Starting to work with	Java, Spring boot, Docker, Kubernetes
Soft skills	Adaptability. Perseverance. Presenting. Communication. Team collaboration. Identifying needs. Creating opportunities.

Software Developer

Work Experience

Fullstack Developer

May 2025 - Present

Accenture UK & Ireland

Current project: A Live product used by millions of people daily. It started as a *front-end* role to modernise an existing system, fix bugs, and add new features. And it is evolving to include full-stack across 6 repos across 2 teams, help to the L3 support team (production) escalations, and ownership of CVE tracking.

(**TS, React, Redux, Java, Spring Boot, Jenkins, Docker, Kubernetes, Buno**)

Junior Fullstack Developer

Sept 2023 - May 2025

Accenture UK & Ireland

2nd Project Frontend role to revamp an existing website, change the stack, improve performance, add new user journeys, and ensure compliance. (**JS → TS, React, Redux, Jest**).

Joined from private Beta to Go-Live stage. Go-Live was successful.

Cross-collaborated closely with Design, Testing, and DevOps teams.

1st Project: Data transformation pipeline (**Go, AWS, Terraform**).

Greenfield project. Joined on initial stages (Alpha- Beta & early PEN test). Worked on every layer.

Delivered the core functionality. Delivered demos to stakeholders.

Going the extra mile:

- Created AWS infra diagrams for the client to showcase our work.
- Delivered SCRUM and retro ceremonies (and for another team once).
- Upon client's request, I created and pitched them a new BD opportunity of a Greenfield project to help innovate.
- Speaker on 2 regional technical talks for Accenture Scotland.
- Got second place on a UK-wide "Raising Stars" award for impact in the company.

Previous roles non-IT related

2014 - 2023

They built my soft-skills, pushed me to achieve english language proficiency, and lead me to where I am now, a software developer.

→ *Moved from Barcelona to Edinburgh in 2017*

Education

MSc in Software Development with AI

Universidad Isabel I (Spain - Fully remote)

2025 - Ongoing

Most relevant subjects:

- Computational thinking & Problem solving
- Computer science fundamentals
- Modern software development ecosystem
- Systems and Networks
- Software engineering
- Requirements analysis
- Best Practices and Design Principles
- Software testing
- Software architecture
- Distributed architecture
- Foundations of AI
- Generative AI
- AI Frameworks
- Responsible use of AI

Projects and exams on every block + Final project in the end

AWS Cloud Practitioner studies

2024

Software Development bootcamp

2022 - 2023

CodeClan bootcamp & Personal projects for programming

BSc in Clinical Psychology

2009 - 2013

Universitat de Barcelona

- After graduating in 2013, I worked in a hospital until 2017.
- Published a scientific article in 2017 with the research team about *Cognitive deficits in executive functions and decision-making Impairments Cluster Gambling disorders*.
